A 2D grid: varying K at near-constant N ≈ 180
B 2D grid: varying N at K = 10
mean principal cosine
$M = 4N_e\bar{m}$
K
4 (n=10, N=160)
5 (n=7, N=175)
6 (n=5, N=180)
8 (n=3, N=192)
10 (n=2, N=200)
measured $M_{1/2}$
predicted M_c
N
200 (n=2)
400 (n=4)
600 (n=6)
1000 (n=10)
ticks above each panel: that curve's own M_c
