
A
fixed $\phi = 0.5$ $(L = 10{,}000)$
B
fixed $n_{B,\text{per deme}} = 4$ $(L = 10{,}000)$
cosine similarity $\langle \hat{u}_{t=500}, u_\infty \rangle^2$
1/M
C
$n_{B,\text{per deme}}$: 2 4 8 16 32
cumulative spatial signal S_r
D
ϕ: 0.1 0.2 0.3 0.4 0.5
relative gap $(\nu_{\text{spatial}} - \nu_{\text{next}})/\nu_{\text{spatial}}$
spatial eigenvalue ν_{spatial}
theoretical eigenvectors
PCs 2-3
PCs 2-5
PCs 2-10
PCs 2-21
relative gap to next mode (left axis)
spatial eigenvalue (right axis)
non-equilibrium stepping-stone (split $t = 500$)
equilibrium stepping-stone
