A
analytical formula
measured ν_1 (median)
10^1
10^0
10^0
10^1
$\nu_1 = \varepsilon_0 + N\tilde{\phi}\frac{\tau}{\bar{\tau}}F_{ST}$
$y = x$
F_{ST} = {0.0149, 0.0154, 0.016, 0.0167, 0.0173, 0.018, 0.0187, 0.0194}, N=1000, $\tilde{\phi}$=0.25
F_{ST}=0.0194, N = {200, 400, 600, 800, 1200, 1600, 2000}, $\tilde{\phi}$=0.25
F_{ST}=0.0194, N=1000, $\tilde{\phi}$ = {0.09, 0.16, 0.21, 0.24, 0.25}
F_{ST}=0.0194, N = {650, 800, 1000, 1200, 1400}, $\tilde{\phi}$ = {0.115, 0.188, 0.25, 0.292, 0.321}
scatter (N, $\tilde{\phi}$, F_{ST} all varied)
B
approximate formula
measured ν_1 (median)
10^0
10^1
approximate $\nu_1 = N\tilde{\phi}F_{ST}$
