A
analytical formula
B
approximate formula
y = x
F_{ST} = {0.0149, 0.0154, 0.016, 0.0167, ...}, N=1000, $\tilde{\phi}$=0.25
F_{ST}=0.0193693, N = {200, 400, 600, 800, ...}, $\tilde{\phi}$=0.25
F_{ST}=0.0193693, N=1000, $\tilde{\phi}$ = {0.09, 0.16, 0.21, 0.24, ...}
F_{ST}=0.0193693, N = {650, 800, 1000, 1200, ...}, $\tilde{\phi}$ = {0.1154, 0.1875, 0.25, 0.2917, ...}
scatter (N, $\tilde{\phi}$, F_{ST} all varied)
measured ν_1 (median)
10^1
10^0
10^0
10^1
$\nu_1 = \varepsilon_0 + \frac{2N\phi_1\phi_2\tau}{\phi_1+\phi_2\bar{\tau}}F_{ST}$
measured ν_1 (median)
10^0
10^1
approximate $\nu_1 = NHF_{ST}$
